Bought this and several other Dover press nature themed coloring books for my 8 yr old daughter. She loves them all. These books are best for use with colored pencils rather than crayons. These books are excellent for 7-11 year old who likes nature and enjoy coloring.

All of the pictures are beautifully drawn and detailed, which makes it fun for adults as well as

children to color.

I love these images. Soooo beautiful. Some of them just seem too similar and sometimes, there are tiny little mistakes. The landscape behind grass would all of sudden disappear after a grass piece :-)
you can just draw it yourself obviously. Overall, I love it and I wish I was a better painter. The images make me feel at peace and comfortable.

It has some parts like grasses that are a little hard to do, but I love coloring the animals and reading about their habitats.

A lot of green areas. I thought it needed a little more color variation. Really nice pictures though. Great as a coloring book, plus I traced some of the pictures and transferred them to watercolor paper to practice using my watercolor pencils.

This one is going to be a challenge for me to work with but I am excited to get started on the many wonderful pictures in it. It came in great condition and within the time allotted. I will continue to look for more items from you in the future.

The half underwater/half above water are my favorites in this coloring book. I love seeing under the water and what is going on. I am an illustrator and do not think I could draw any of these as well. The drawings are excellent and I cannot wait to color all of them with my professional colored pencils.....thank you !

My wife and I have enjoyed visiting various nature areas, over the years. This Freshwater Pond Coloring Book provides several examples of natural displays of the microcosm of life around a small pond or lake, which can be further enjoyed by photography or color rendering of the presented scenes displayed in this book, in the sincerest appreciation of the life encountered. We use this book to provide colored pencil or watercolor rendering of the scenes presented, as a composite of life surrounding a freshwater pond, where it would be more difficult to arrange and achieve using photography. The scenes depicted provide additional opportunity to apply various techniques to better present light or shade, which is often captured by camera. I would recommend this book to anyone who enjoys both nature and artistic expression.
