Age Range: 8 - 12 years

Grade Level: 2 - 6

## **Customer Reviews**

We checked this book out at the library and my 3-1/2 year old loves this book almost as much as I do. It is a wonderful text that teaches how the sun moves across the sky, how shadows change, and how the earth orbits the sun. Well written with cute little conversation bits for fun. This is a bit longer than most of our bedtime stories but holds his interest and peaks his curiosity. The back of the book has instructions for making a sundial as well as other hands-on learning ideas. This book would be great for a classroom as well.

I checked this book out of the library and liked it so much I am going to order a copy. It's a great introduction to the sun in relation to day and night. I think it's appropriate for elementary aged kids. My 4 & 6 year olds both enjoyed it. Some of the material is a little too advanced for them, but even skipping the more detailed parts, there was plenty of meat. I'm buying a copy because I think it will

be a useful book to come back to over the next several years.

Used this book during an Education Class for a Pre-School Practium. Its a great book for that age group.
